

Project Proposal: Safe Journey (Egypt Tourism Platform)

1.1 Project Overview

Project Title: Egypt Tourism Platform — 'Safe Journey'

Project Type: Full Stack Web Application (.NET 8 + SQL Server)

Problem Statement: Tourism in Egypt suffers from the lack of a trusted platform that protects tourists' rights, leading to scams by unlicensed guides and the absence of a centralized system to verify guide identities.

Proposed Solution: A comprehensive web platform that connects tourists with officially licensed tour guides verified by the Egyptian Ministry of Tourism, with a transparent booking system and genuine reviews.

1.2 Objectives

1. Verify the identity of every guide before listing — KPI: 100% of guides have an official license number.
2. Enable tourists to book trips within minutes — KPI: Average booking time < 5 minutes.
3. Build a transparent review system — KPI: Users can only review after completing a real trip.
4. Provide an admin dashboard — KPI: Approve/reject guide requests within 24 hours.

1.3 Project Scope

In Scope:

- Authentication system (Tourist / Guide / Admin).
- Guide verification and approval by admin.
- Search and booking system.
- Admin dashboard for platform management.
- Documented REST API using Swagger.

Out of Scope:

- Mobile application (Native App).
- Online payment gateway (cash initially).
- Live chat system.
